## Model JR 200

Capacity:

15 000 kg

Height range

1040 - 1330 mm

- rubber wheels
- moving handle
- anti-slip screws
- lifting ratchet

Trailer Safety Jacks are used for loading parked trailers. Adjustable screw jack provides safe secure support when placed under the front of an uncoupled trailer. A single jack under the fifth wheel plate can prevent a nose heavy trailer from tipping and prevent landing gear failure. Under certain hazardous conditions a jack at each corner will prevent a trailer upending during loading. Special anti-slip screws in bottom plate.
